

### HOSTED DESKTOP SOLUTIONS

#### Introduction

With Cloud4 Hosted Desktop, our secure, corporate-class hosted IT solution, you get a complete remote hosted desktop that allows you and your staff to login to your desktop from any location in the world, with complete security.

Imagine the possibilities if you could arm your sales teams, global offices, home workers and managers with a powerful, accessible system that safeguards your data from hackers, viruses, loss and theft.

Disaster recovery is essential in today's business world and with your data hosted in our secure data centers, you can rest assured that your data is in safe hands day and night, with strict security protocols and safeguards to ensure that your business data and applications are available 24 hours a day, 7 days a week.

#### Why Cloud4 Computers?

Our hosted desktop systems are powered by Terminal Services and Citrix technology. Terminal Services is Microsoft based technology and is very suited to smaller organisations due to the competitive pricing, whereas Citrix is suited to larger organisations and corporate companies. We are one of the only companies that offers both Terminal Services and Citrix solutions, giving customers more choice.

In addition, because of the design architecture of our hosting platform, we are one of the only hosted desktop providers who give you the ability to host almost any application within your virtual environment. This has proved to be a major aspect in the growth of our solution as, let's face it; if you have decided to move your businesses into the cloud, and you can't host your most utilised application, you lose much of the benefit of migrating to the cloud in the first place.

#### What do you get in a Cloud4 Hosted Desktop?

With a Cloud4 Hosted Desktop, your organisation actually buys its own private cloud server. This means you are not simply sharing server space with other organisations, but have you own dedicated resources to manage as you would an onsite server. Within this environment we can install any applications you own and you distribute them across your users as required.

Cloud4 then layer a unique blend of additional applications into the environment, providing you with a complete business solution you can access from any location worldwide. Each user on hosted desktop receives;

- Familiar windows operating environment
- Office 2007 Professional
- Adobe Acrobat Reader
- Spam and Virus Firewall
- 1gb home drive space
- 10gb network drive space
- Online data backup\*
- IT support for the hosted environment

#### Add on's : Microsoft Hosted Exchange Mailbox with 25GB of storage space!

*\* Data backup is limited to the combined home and network drive space for each user (11gb) and times by the number of users to provide the total company data backup volume available; e.g. 10 users at 11gb provides a company data backup capacity of 111gb. Additional backup is simply charged per gb per month based on the average data volume stored in the data centre.*

## Cloud4 Hosted Desktop Service Benefits

- Lower IT operation costs
- Minimal capital investment required
- No maintenance costs for servers
- Lower hardware costs for user devices
- Software assurance for inclusive software
- Improved business performance through increased flexibility
- Capacity to instantly scale your IT resources

## Summary

What makes Cloud4 stand out from other providers is our ability to create bespoke solutions for our clients which meet the specific needs of your business! We have learned from experience that every clients needs are slightly different and it's our solutions that need to be flexible to your requirements, not just your business to our solutions as with many other providers.

If your business has specific hosting requirements we are always happy to hear them. One of our skilled consultants will take the time to understand what you need and create a solution for it, all cost effectively.

So; for the best UK only based low cost, scalable, flexible, and reliable, secure hosting solution in the cloud. Cloud4 Computers has everything you need.
